

NEXT LEVEL LOGISTICS

Developing Sustainable Revenue Through Commercial Transportation Investments

- * Consistent Weekly Revenue Opportunities
- * Experienced Drivers & Established Freight Routes
 - * Scalable Fleet Growth Model
 - * Passive Investment Potential

EXECUTIVE SUMMARY

Next Level Logistics offers investors the opportunity to participate in the expanding transportation and logistics sector without the responsibility of managing daily operations

We provide:

- Qualified CDL Drivers
- Qualified None CDL Drivers
- Established Freight Routes
- Dispatch & Operations Management
- Fleet Support & Regulatory Compliance

Investors provide:

- Capital for Truck Acquisition
- Funding for Fleet Expansion

Together, we establish a recurring revenue model designed to generate consistent weekly cash flow.

THE OPPORTUNITY

The trucking industry is responsible for transporting more than 70% of all freight within the United States.

Demand continues to grow due to:

- * Expansion of E-commerce
- * Growth in Manufacturing
- * Increasing Supply Chain Requirements
- * Essential Transportation Services

Our model enables investors to participate in this multi-billion-dollar industry without requiring prior trucking experience.

HOW THE PROGRAM WORKS

Step 1

Investor acquires truck(s)

Step 2

Next Level Logistics assigns qualified drivers

Step 3

Our dispatch team secures freight opportunities and routes

Step 4

Revenue is generated through ongoing operations

Step 5

Profit distributions are issued to investors

Net Profit Calculation Exmple

Gross Load Revenue

Less:

- * Driver Compensation (30% of load revenue)
- * Dispatch & Factoring Fees (15% of load revenue)
- * Fuel Expenses

Formula

Net Profit = Gross Load Revenue – Driver Compensation (30%) – Dispatch & Factoring Fees (15%) – Fuel Expenses

Example:

Gross Load Revenue: \$10,000

- * Driver Compensation (30%): \$3,000
- * Dispatch & Factoring Fees (15%): \$1,500
- * Fuel Expense: \$1,500

Net Profit

$\$10,000 - \$3,000 - \$1,500 - \$1,500 = \$4,000$

Our objective is to maximize fleet utilization while minimizing operational downtime.

Updated Profit Margin

Previous Example Profit:

- \$3,000 Net Profit (30%)

Updated Example Profit:

- \$4,000 Net Profit (40%)

This reflects a 33.3% increase in net profit per load compared to the original model.

Everything else in the presentation can remain unchanged unless you'd also like me to update the investor earnings projections to reflect the higher profitability from the reduced driver and dispatch percentages. That would increase the projected returns shown on Slides 5, 6, and 10.
